

Outline of issues for Bellingham hearing.

EIS issues not addressed in the draft:

Status of fish issues in Padden Creek

Status of fish issues in Chuckanut Creek

Wetland impact on groundwater that reaches the Creeks

Impact of stormwater runoff to creeks due to alteration of impervious surfaces.

My intent is to cover these issues at a simple level for the public and the staff but making the point of the critical nature of these impacts based on historic information with projects I have worked on and followed in documented written material.
